

IBM Turbonomic – AI-Driven Application Resource Management

Deliver Peak Application Performance with Smart Automation

In today's fast-paced digital landscape, application performance is everything. Whether your workloads run on **Azure, AWS, or a hybrid cloud**, **IBM Turbonomic** ensures they always have the exact resources they need—no more, no less.

How It Works

- ◆ **Real-time Insights** – Continuously monitors your applications to determine resource needs.
- ◆ **Proactive Optimization** – Identifies and eliminates bottlenecks before they impact performance.
- ◆ **Automated Actions** – Dynamically adjusts compute, storage, and network resources to ensure seamless performance.
- ◆ **Cloud Cost Control** – Optimizes resource allocation across cloud and on-prem environments, cutting unnecessary spending.

The Impact

- ✓ **Zero downtime** – Prevent performance issues before they happen.
- ✓ **Faster user experiences** – Ensure smooth, high-speed application performance.
- ✓ **Lower operational costs** – Automate scaling and reduce wasteful over-provisioning.

Future-Proof Your IT Strategy

Empower your IT teams with **AI-driven automation** and **real-time application resource management**.
